

## Project Sprint Retro Notes

Team: FRI – 10:30 - 5

Sprint: 0

Date: 14/08/2019

Attended:

Scrum Master: Ruchelle Balasuriya and Shaunak Karuna

Product Owner: Amir Homayoon Ashrafzadeh

Development team: Amna Alfarah Alonto (s778713) and Julian Bitetto(s3690935), Sebastian Wisidagama(s3769969), Ruchelle Balasuriya(s3781183) and Shaunak Karuna(s3782215)

### 1. Things That Went Well

- All members of the team have been able to set up all required tools to begin development in future sprints
- Even contributions from all team members thus far
- Good communication across the teams with frequent meetings interspersed throughout the week
- Adapted to changes and challenges if they arose
- Met deadlines and work was being done promptly
- Team is overall happy thus far

### 2. Things That Could Have Gone Better

- Did not meet each other until the first tutorial, which meant we were behind in the first tutorial
- Overcomplicated tasks at times (largely due to limited understanding of the scope of the project) which wasted some time

### 3. Things That Surprised Us

- The new tools being used this semester, i.e. Notion, React, Postman, etc.
- Potential amount of work to be done for the project

### 4. Lessons Learned

- Learnt that we have a potential to be hard-working and apt team
- Learnt that our team members are adaptable and good communicators

### 5. Final Thoughts

Now that the team knows each other and has some experience working together we are primed for future sprints. We are working effectively together and have completed most tasks required for Sprint 0. We have clarified the scope with the product owner and any other doubts we had, and we have made a good start to the project. It is important to continue this moving forward.
