

Project Sprint Review Notes

Team: FRI – 10:30 - 5

Sprint: 3

Date: 09/10/2020

Attended:

Scrum Master: Shaunak Karuna, Ruchelle Balasuriya

Product Owner: Amir Homayoon Ashrafzadeh

Development team: Amna Alfara Alonto (s3778713), Julian Bitetto (s3690935), Ruchelle Balasuriya (s3781183), Sebastian Wisidagama (s3769969), Shaunak Karuna (s3782215)

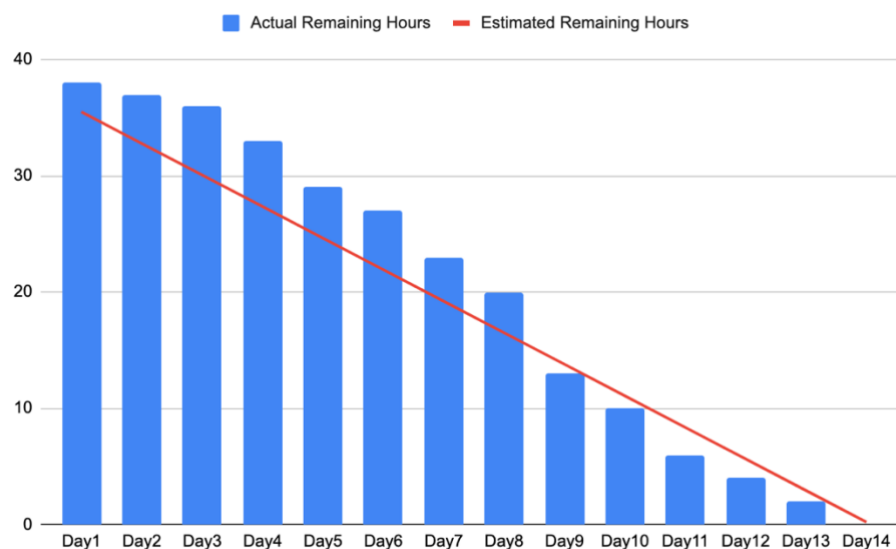

Sprint Goals

The goals for these sprints were to complete the admin functionality, by ensuring they could cancel upcoming bookings, and view past bookings. Additionally, we planned to implement the login and sign up functionality using JWT. Our team aimed to also improve our user interface.

Status Overview

The sprint items chosen were tasks that were required to be completed in order to finish implementing the admin functionality and login/sign up. There was a total of 22 tasks that we assigned for this sprint, over the 2-week period. Initially when we created the tasks, we did not take into consideration the time needed for implementing the JSON web tokens for the front and backend. Therefore, we created new tasks to take this into consideration. We also created a new task to dedicate time for UI improvement. Each member was assigned 7 hours each. By the end of the sprint, all the allocated tasks were completed. We had aimed to complete all functionality of the project by the end of this sprint.

Sprint Statistics

The blue columns represent the actual number of hours that needs to be completed. The red line is the estimated remaining hours, which is the ideal situation. The y-axis is the number of hours, and the x-axis is the day of the sprint.

The group was not able to as many hours as expected during first week of the sprint. Therefore, most of the hours were spent during the second week of the sprint. Once we reached day 9, most of the members did extra work to catch up.
